

Last Time

- Balance theorem – statement and proof.
- Weak structural balance.
- Weak balance theorem – statement (read proof on textbook).
- Game theory introduction.
- Presentation vs. exam example.

Warm Up

Label edges with a question mark with a '+' or '-' such that the network is:

- a. Balanced
- b. Weakly balanced but not balanced
- c. Not balanced or weakly balanced

Warm Up

1. This network is:

- A. Balanced
- B. Weakly balanced but not balanced
- C. Not balanced or weakly balanced
- D. Incomplete
- E. None of the above

Warm Up

1. This network is:

- A. Balanced
- B. Weakly balanced but not balanced
- C. Not balanced or weakly balanced
- D. Incomplete
- E. None of the above

Warm Up

2. This network is:

- A. Balanced
- B. Weakly balanced but not balanced
- C. Not balanced or weakly balanced
- D. Incomplete
- E. None of the above

Warm Up

2. This network is:

- A. Balanced
- B. Weakly balanced but not balanced
- C. Not balanced or weakly balanced
- D. Incomplete
- E. None of the above

Warm Up

3. This network is:

- A. Balanced
- B. Weakly balanced but not balanced
- C. Not balanced or weakly balanced
- D. Incomplete
- E. None of the above

Warm Up

3. This network is:

- A. Balanced
- B. Weakly balanced but not balanced**
- C. Not balanced or weakly balanced
- D. Incomplete
- E. None of the above

Warm Up

4. This network is:

- A. Balanced
- B. Weakly balanced but not balanced
- C. Not balanced or weakly balanced
- D. Incomplete
- E. None of the above

Warm Up

4. This network is:

A. **Balanced**

B. Weakly balanced but not balanced

C. Not balanced or weakly balanced

D. Incomplete

E. None of the above

Presentation vs. Exam

- Presentation with a partner and exam tomorrow.

Presentation vs. Exam

- Presentation with a partner and exam tomorrow.
- You and your partner only have time to prepare for one.

Presentation vs. Exam

- Presentation with a partner and exam tomorrow.
- You and your partner only have time to prepare for one.
- Exam:
 - If you study for the exam you will get a 92
 - If you don't study you will get an 80.

Presentation vs. Exam

- Presentation with a partner and exam tomorrow.
- You and your partner only have time to prepare for one.
- Exam:
 - If you study for the exam you will get a 92
 - If you don't study you will get an 80.
- Presentation:
 - If both you and your partner prepare you get 100
 - If only one of you prepares you get 92
 - If neither of you prepare you get 84

Presentation vs. Exam

- Presentation with a partner and exam tomorrow.
- You and your partner only have time to prepare for one.
- Exam:
 - If you study for the exam you will get a 92
 - If you don't study you will get an 80.
- Presentation:
 - If both you and your partner prepare you get 100
 - If only one of you prepares you get 92
 - If neither of you prepare you get 84
- You cannot coordinate with your partner

Presentation vs. Exam

The game:

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

Presentation vs. Exam

The game:

- **Players:** You and Your Partner

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

Presentation vs. Exam

The game:

- **Players:** You and Your Partner
- **Strategies:** Prepare for “Presentation” and “Exam”

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

Presentation vs. Exam

The game:

- **Players:** You and Your Partner
- **Strategies:** Prepare for “Presentation” and “Exam”
- **Payoffs:** The average grade of presentation and exam

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

Presentation vs. Exam

The game:

- **Players:** You and Your Partner
- **Strategies:** Prepare for “Presentation” and “Exam”
- **Payoffs:** The average grade of presentation and exam

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

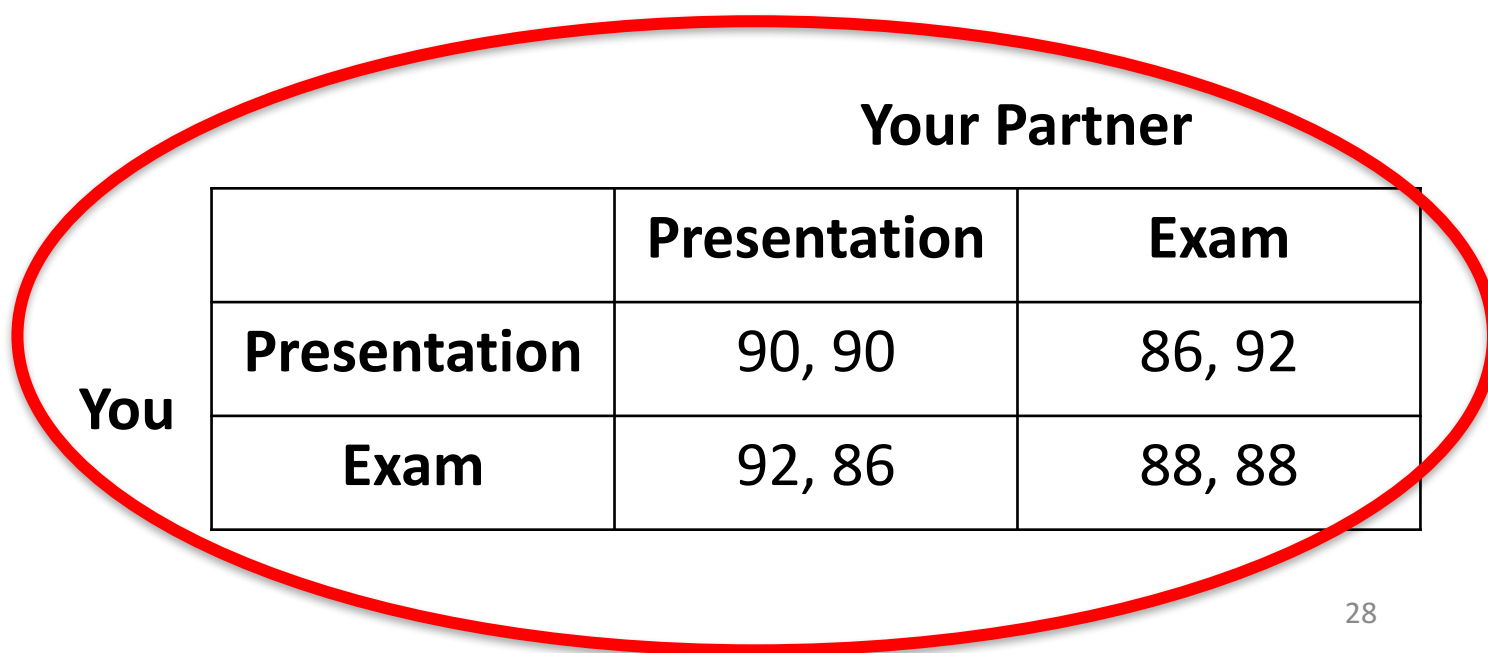

Diagram illustrating the game structure and payoffs:

- Your Partner's payoff:** Indicated by a red box and an arrow pointing to the second number in each payoff pair.
- Your payoff:** Indicated by a red box and an arrow pointing to the first number in each payoff pair.
- Payoff Pairs:**
 - (Presentation, Presentation): 90, 90
 - (Presentation, Exam): 86, 92
 - (Exam, Presentation): 92, 86
 - (Exam, Exam): 88, 88
- Highlighted Payoffs:** The payoffs 92 and 86 in the (Exam, Presentation) cell are circled in red.

Presentation vs. Exam

The game:

- **Players:** You and Your Partner
- **Strategies:** Prepare for “Presentation” and “Exam”
- **Payoffs:** The average grade of presentation and exam
- **Payoff Matrix:** Summarizes the game.

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

Game Assumptions

- Players only care about the payoffs in the game.

Game Assumptions

- Players only care about the payoffs in the game.
- Each player has complete information about the game:
 - Strategies available to all players.
 - Payoffs for each choice of strategies for all players.

Game Assumptions

- Players only care about the payoffs in the game.
- Each player has complete information about the game:
 - Strategies available to all players.
 - Payoffs for each choice of strategies for all players.
- All players are *rational*:

Game Assumptions

- Players only care about the payoffs in the game.
- Each player has complete information about the game:
 - Strategies available to all players.
 - Payoffs for each choice of strategies for all players.
- All players are *rational*:
 - Players want to get the highest payoff possible

Game Assumptions

- Players only care about the payoffs in the game.
- Each player has complete information about the game:
 - Strategies available to all players.
 - Payoffs for each choice of strategies for all players.
- All players are *rational*:
 - Players want to get the highest payoff possible
 - Players will choose strategies that optimize their payoff, if they can.

How would you play this game?

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

How would you play this game?

- If your partners studies for the exam →

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

How would you play this game?

- If your partners studies for the exam →

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

How would you play this game?

- If your partners studies for the exam → you should study for the exam to get 88 instead of 86.

		Your Partner	
You		Presentation	Exam
	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

How would you play this game?

- If your partners studies for the exam → you should study for the exam to get 88 instead of 86.
- If your partner prepares for the presentation →

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

How would you play this game?

- If your partners studies for the exam → you should study for the exam to get 88 instead of 86.
- If your partner prepares for the presentation → you should study for the exam to get 92 instead of 90.

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

How would you play this game?

- If your partners studies for the exam → you should study for the exam to get 88 instead of 86.
- If your partner prepares for the presentation → you should study for the exam to get 92 instead of 90.

Regardless of your friend's strategy, you should study for exam.

		Your Partner	
		Presentation	Exam
You	Presentation	90, 90	86, 92
	Exam	92, 86	88, 88

Outcome Prediction

A ***Strictly dominant strategy*** for a player is a strategy that is strictly better than all other options regardless of what the other player does.

		Your Partner	
		P	E
You	P	90, 90	86, 92
	E	92, 86	88, 88

Outcome Prediction

A ***Strictly dominant strategy*** for a player is a strategy that is strictly better than all other options regardless of what the other player does.

“Exam” is a strictly dominant strategy for both players. We expect both players to choose “Exam” getting 88.

You

Your Partner

	P	E
P	90, 90	86, 92
E	92, 86	88, 88

Outcome Prediction

A ***Strictly dominant strategy*** for a player is a strategy that is strictly better than all other options regardless of what the other player does.

“Exam” is a strictly dominant strategy for both players. We expect both players to choose “Exam” getting 88.

If you both players chose “Presentation”, they would both get a higher payoff of 90, but this outcome is not achievable without coordination.

		Your Partner

You	P	90, 90	86, 92
	E	92, 86	88, 88

Prisoners Dilemma

Two robbery suspects are
interrogated by police separately.
They are both told the following:

Prisoners Dilemma

Two robbery suspects are
interrogated by police separately.
They are both told the following:

- If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.

Prisoners Dilemma

Two robbery suspects are
interrogated by police separately.
They are both told the following:

- If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.
- If you both confess, you will both get a 4 year sentence

Prisoners Dilemma

Two robbery suspects are
interrogated by police separately.
They are both told the following:

- If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.
- If you both confess, you will both get a 4 year sentence
- If neither one of you confesses, you will both get a 1 year sentence.

Prisoners Dilemma

Two robbery suspects are interrogated by police separately. They are both told the following:

- If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.
- If you both confess, you will both get a 4 year sentence
- If neither one of you confesses, you will both get a 1 year sentence.

		Suspect 2	
		C	NC
Suspect 1	C		
	NC		

Prisoners Dilemma

Two robbery suspects are interrogated by police separately. They are both told the following:

- **If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.**
- If you both confess, you will both get a 4 year sentence
- If neither one of you confesses, you will both get a 1 year sentence.

- **If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.**
- If you both confess, you will both get a 4 year sentence
- If neither one of you confesses, you will both get a 1 year sentence.

		Suspect 2	
		C	NC
Suspect 1	C		0, -10
	NC	-10, 0	

Prisoners Dilemma

Two robbery suspects are interrogated by police separately. They are both told the following:

- If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.
- **If you both confess, you will both get a 4 year sentence**
- If neither one of you confesses, you will both get a 1 year sentence.

		Suspect 2	
		C	NC
Suspect 1	C		0, -10
	NC	-10, 0	

Prisoners Dilemma

Two robbery suspects are interrogated by police separately. They are both told the following:

- If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.
- **If you both confess, you will both get a 4 year sentence**
- If neither one of you confesses, you will both get a 1 year sentence.

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	

Prisoners Dilemma

Two robbery suspects are interrogated by police separately. They are both told the following:

- If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.
- If you both confess, you will both get a 4 year sentence
- **If neither one of you confesses, you will both get a 1 year sentence.**

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	

Prisoners Dilemma

Two robbery suspects are interrogated by police separately. They are both told the following:

- If you confess and your partner doesn't, you will be released and your partner will get a 10 year sentence.
- If you both confess, you will both get a 4 year sentence
- **If neither one of you confesses, you will both get a 1 year sentence.**

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1,-1

Prisoners Dilemma

What should be prisoner's 1 strategy?

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1,-1

Prisoners Dilemma

What should be prisoner's 1 strategy?

- If suspect 2 confesses, suspect 1 should confess to get -4 instead of -10.

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1, -1

Prisoners Dilemma

What should be prisoner's 1 strategy?

- If suspect 2 confesses, suspect 1 should confess to get -4 instead of -10.
- If suspect 2 does not confess, suspect 1 should confess to get 0 instead of -1.

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1, -1

Prisoners Dilemma

What should be prisoner's 1 strategy?

- If suspect 2 confesses, suspect 1 should confess to get -4 instead of -10.
- If suspect 2 does not confess, suspect 1 should confess to get 0 instead of -1.

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1, -1

No matter what suspect 2 does, suspect 1 should confess. So *Confess* is a *strictly dominant strategy* for suspect 1.

Prisoners Dilemma

What should be prisoner's 1 strategy?

- If suspect 2 confesses, suspect 1 should confess to get -4 instead of -10.
- If suspect 2 does not confess, suspect 1 should confess to get 0 instead of -1.

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1, -1

No matter what suspect 2 does, suspect 1 should confess. So *Confess* is a *strictly dominant strategy* for suspect 1.

By symmetry, confess is also a *strictly dominant strategy* for suspect 2.

Prisoners Dilemma

Players will not achieve the better outcome of -1,-1.

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1,-1

Prisoners Dilemma

Players will not achieve the better outcome of -1,-1.

Cooperation vs. Self interest.

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1,-1

Prisoners Dilemma

Players will not achieve the better outcome of -1,-1.

Cooperation vs. Self interest.

Prisoners dilemma models other situations such as:

- Performance-enhancing drugs in professional sports

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1,-1

Prisoners Dilemma

Players will not achieve the better outcome of -1,-1.

Cooperation vs. Self interest.

Prisoners dilemma models other situations such as:

- Performance-enhancing drugs in professional sports
- Arms races between opposing nations.

		Suspect 2	
		C	NC
Suspect 1	C	-4, -4	0, -10
	NC	-10, 0	-1,-1

Some Notation

If S is a strategy chosen by player 1,
and T is a strategy chosen by player 2,
we say $P_i(S,T)$ is the payoff to player i :

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1,-1

Some Notation

If S is a strategy chosen by player 1,
and T is a strategy chosen by player 2,
we say $P_i(S,T)$ is the payoff to player i :

Find:

$$P_1(S1,S2) = 0$$

$$P_2(S2,S2) = -1$$

$$P_2(S2,S1) = 0$$

$$P_1(S2,S1) = -10$$

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1, -1

Best Responses and Dominant Strategies

A best response is the best choice for a player given the strategy chosen by her opponent.

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1,-1

Best Responses and Dominant Strategies

A **best response** is the best choice for a player given the strategy chosen by her opponent.

Strategy S for Player 1 is a **best response** to strategy T of Player 2 if:

$$P_1(S,T) \geq P_1(S',T) \text{ for all other strategies } S'$$

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1,-1

Best Responses and Dominant Strategies

A **best response** is the best choice for a player given the strategy chosen by her opponent.

Strategy S for Player 1 is a **best response** to strategy T of Player 2 if:

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1, -1

$P_1(S,T) \geq P_1(S',T)$ for all other strategies S'

What's the best response by player 2 to strategy S1 of player 1?

Best Responses and Dominant Strategies

A **best response** is the best choice for a player given the strategy chosen by her opponent.

Strategy S for Player 1 is a **best response** to strategy T of Player 2 if:

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1, -1

$P_1(S,T) \geq P_1(S',T)$ for all other strategies S'

What's the best response by player 2 to strategy S1 of player 1?

$P_2(S1,S1) = -4$ and $P_2(S1,S2) = -10$, so S1 is the best response by player 2.

Best Responses and Dominant Strategies

A **best response** is the best choice for a player given the strategy chosen by her opponent.

Strategy S for Player 1 is a **best response** to strategy T of Player 2 if:

		Player 2	
		S1	S2
Player 1	S1	-4, -4	4, -4
	S2	-10, 0	-1, -1

$P_1(S,T) \geq P_1(S',T)$ for all other strategies S'

What's the best response by player 2 to strategy S1 of player 1?

Best Responses and Dominant Strategies

A **best response** is the best choice for a player given the strategy chosen by her opponent.

Strategy S for Player 1 is a **best response** to strategy T of Player 2 if:

		Player 2	
		S1	S2
Player 1	S1	-4, -4	4, -4
	S2	-10, 0	-1, -1

$P_1(S,T) \geq P_1(S',T)$ for all other strategies S'

What's the best response by player 2 to strategy S1 of player 1?

$P_2(S1,S1) = -4$ and $P_2(S1,S2) = -4$, so S1 and S2 are both best responses by player 2.

Best Responses and Dominant Strategies

There could be multiple best responses to a strategy if more than one strategy has the same payoff.

When a single best response exists, we call it a **strict best response**.

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1, -1

Best Responses and Dominant Strategies

There could be multiple best responses to a strategy if more than one strategy has the same payoff.

When a single best response exists, we call it a **strict best response**.

Strategy S for Player 1 is a **strict best response** to strategy T for Player 2 if:

$P_1(S,T) > P_1(S',T)$ for all other strategies S'

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1,-1

Best Responses and Dominant Strategies

A **dominant strategy** for player 1 is a strategy that is a best response to every strategy of player 2.

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1,-1

Best Responses and Dominant Strategies

A **dominant strategy** for player 1 is a strategy that is a best response to every strategy of player 2.

A **strictly dominant strategy** for player 1 is a strategy that is a strict best response to every strategy of player 2.

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1, -1

Best Responses and Dominant Strategies

A **dominant strategy** for player 1 is a strategy that is a best response to every strategy of player 2.

A **strictly dominant strategy** for player 1 is a strategy that is a strict best response to every strategy of player 2.

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1, -1

Does player 2 have a strictly dominant strategy?

Best Responses and Dominant Strategies

A **dominant strategy** for player 1 is a strategy that is a best response to every strategy of player 2.

A **strictly dominant strategy** for player 1 is a strategy that is a strict best response to every strategy of player 2.

		Player 2	
		S1	S2
Player 1	S1	-4, -4	0, -10
	S2	-10, 0	-1, -1

Does player 2 have a strictly dominant strategy?

Yes. We checked that S1 was a strict best response to S1.

Since $P_2(S2, S1) = 0$ and $P_2(S2, S2) = -1$, then S1 is also a strict best response by player 2 to strategy S2 by player 1.

A New Product

- Two firms are planning to produce a new product.

A New Product

- Two firms are planning to produce a new product.
- Choice between an up-scale (US) and low-priced (LP) version of the product.

A New Product

- Two firms are planning to produce a new product.
- Choice between an up-scale (US) and low-priced (LP) version of the product.
- 60% of population prefers the low-priced version and 40% prefers the upscale version.
